PROJECT EXPERIENCE

Aug. 2019 – Present
Maribot Vane 2.0 Design Project
KTH & SMaRC (Swedish Maritime and Robotic Center), Stockholm, Sweden

- Designed and built the Maribot Vane 2.0, an autonomous sailing vessel
- Engineered and manufactured the glass fibre-made rudder
- Evaluated the mechanical behaviour under certain load contions for most of 3D printed parts as well as parts made from composite materials
- Studied and assessed the performance of the components made from composite materials in terms of weight and strength

Sept. 2018 – Dec. 2018
Project on simulation-based design of the cruise ship balcony
TMR4320 Simulation-Based Design, NTNU, Trondheim

- Developed an initial design concept and assessed the principle dimensions, stress distribution & deflection
- Conducted the FEA analysis under multiple loading conditions and simulated the
- Established a parametric model and optimised the model using PSO codes out of minimum weight

Supervisor: Ekaterina Kim, Associate Professor

Aug. 2017 – Jan. 2018
Project on the investigation of flow pattern on a circular cylinder
NM402 Theory and Practice of Marine CFD, Univ. of Strathclyde, Glasgow

- Studied the vortex shedding phenomenon and physics behind VIV and applied the time-domain VIV model for low mass ratio system
- Reviewed analysis methods such as finite volume method and finite difference method for necessary analysis of computational fluid dynamics
- Simulated the behaviour of the flow pattern for a rigid body circular cylinder under steady flow condition using Star-CCM+

Supervisor: Qing Xiao, Reader; Wendi Liu, Research Associate
